Hi-Liner SG used with Protecta PLUS™ Child Harness

**Hi-Liner™ SG**

WITH  
**SLIDE GUARD™**  
CLIP

# FEATURES:

Exclusive  
Safe-n-Sound  
SLIDEGUARD™  
Clip

- 1** The SLIDEGUARD™ Clip is a life saving device that prevents your child from sliding under the lap-belt (submarining) during impact, thus minimising the risk of abdominal injury.

- 2** Hi-Liner™ SG is the first Expandable Booster Seat designed with slots in the seat cover and shell. This Booster Seat is compatible with Safe-n-Sound Protecta PLUS™ Harness for added safety.

- 3** Deep side wings contain your child's head and body, and in the event of a crash they shield your child from impacting with the vehicle door. The EPS foam liner provides additional protection and in the event of a crash absorbs energy, protecting your child's head.

**4** The sash guide, which adjusts in height with the headrest, securely positions the car seat belt over your child's shoulder.

**7** The red colour coded labelling and seat belt paths indicate the positioning of the seat belt for to ensure correct fit.

**5** Secured with Tether to the Vehicle Anchor Point to provide superior stability in the car.

**8** Arm rests provide your child extra comfort.

**9** Includes messy mat to protect car from damage.

**6** The one hand adjustable headrest is simple to change height to comfortably fit a child.

**10** Retractable cup holders designed to hold cans and bottles.

• Crimson

## Seat belt guides

Children may be injured in an accident if the adult seat belt is not correctly positioned across their body.

Seat belt guides correctly position the seat belt over your child's shoulder and pelvis, away from the neck and stomach areas.

## Versa Tether

Versa Tether allows the connection of the Safe-n-Sound Protecta PLUS Harness.

# Designed to accommodate a child from 4 years to 6-8 years (approx.)

Pink

Phantom

## Protecta PLUS Harness Compatible

A Child Harness, used in conjunction with a lap seat belt, maximises upper torso support. It can also prevent a child from falling out of the sash belt whilst they are sleeping, slumping or wriggling. Without torso support you child is at a risk of being flung forward in a crash which may cause serious head, abdominal and spinal injuries.

## SLIDEGUARD™ Clip

The SLIDEGUARD™ Clip positions the lap-belt of the vehicle correctly over the hips and thighs. It prevents a child's hips from sliding forward during trips or submarining in a crash. Other so called Anti-Submarining designs do not ensure the lap belt is correctly positioned at all times.

# SLIDEGUARD™ CLIP

LIFE SAVING BELT POSITIONING DEVICE

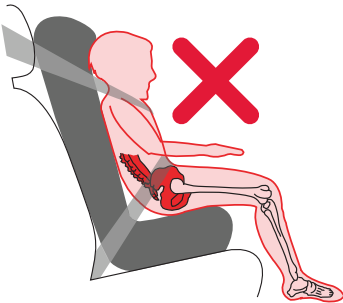

## What is Submarining?

When a child's pelvis slides under the lap-belt in a car crash this is known as submarining and means that the seat belt could crush the abdominal organs. If the seat belt sits on the abdomen in a crash your child is at risk of serious internal injuries or death.

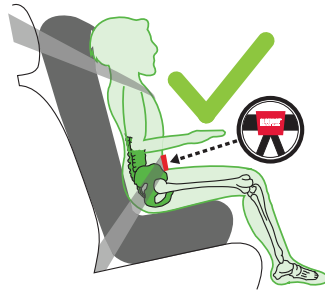

**SLIDEGUARD™ Clip** is a life saving device that prevents your child from sliding under the lap-belt (submarining) during impact, thus minimising the risk of abdominal injury.

## UNSAFE Slump

The current Australian Standards tests use rigid dummies which don't slump, slouch or cry. Real life isn't exactly like this; many children wriggle or slump causing the seat belt to sit on their abdomen rather than across their hips and thighs. Once the seat belt is on the abdomen the child is in risk of serious injury in a crash.

## SAFE SLIDEGUARD™

The SLIDEGUARD™ Clip positions the lap-belt of the vehicle correctly over the hips and thighs. It prevents a child's hips from sliding forward during trips or submarining in a crash. Other so called Anti-Submarining designs do not ensure the lap-belt is correctly positioned at all times.
